

WHAT FLORIDIANS THINK ABOUT COMMUNITY PREPAREDNESS

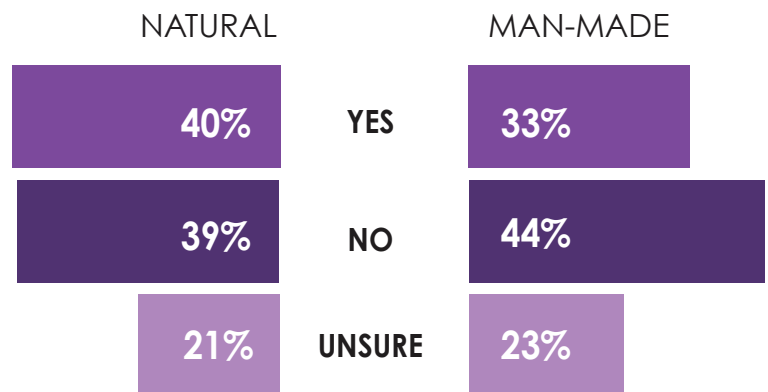

A growing concern throughout the country is preparedness for both individuals and communities. Residents must be prepared for both natural and man-made disasters in order to ensure the sustainability of Florida's economy and communities. The UF/ IFAS Center for Public Issues Education in Agriculture and Natural Resources surveyed more than 500 Floridians in January 2016 to examine how prepared respondents felt when facing possible future disasters.

FLORIDA RESIDENTS DOUBT COMMUNITY DISASTER READINESS

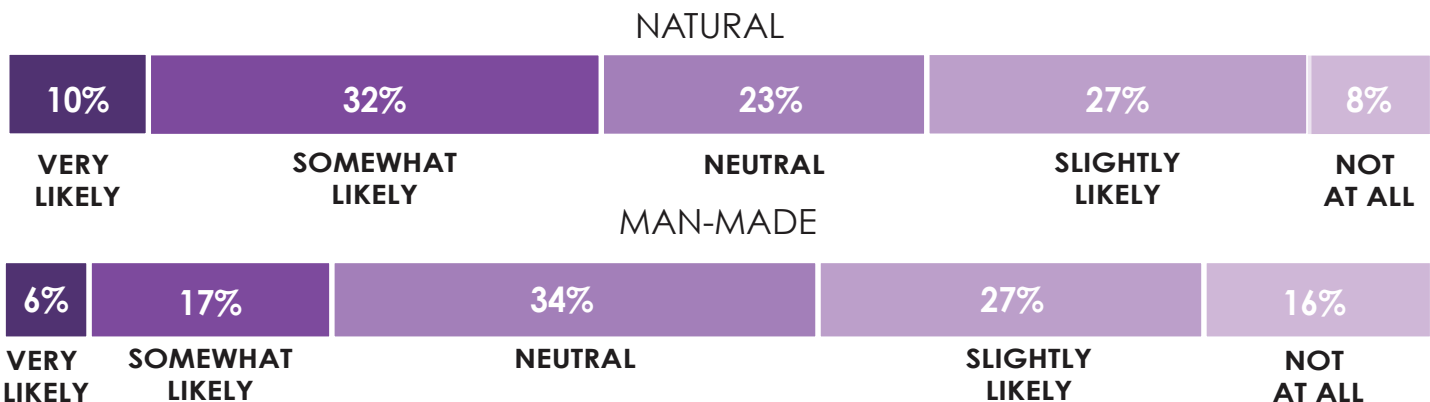

According to a recent survey by the Center for Public Issues Education in Agriculture and Natural Resources, the majority of Florida residents either do not believe their communities are ready for a disaster or are unsure of their readiness.

Floridians were also asked to gauge their thoughts on the likelihood of disasters occurring in their communities. Twice as many respondents thought a natural disaster was likely to occur than a man-made one. Forty-two percent of respondents said it was very or somewhat likely that a natural disaster would happen in their community in the next year.

IS YOUR COMMUNITY READY FOR A DISASTER?

LIKELIHOOD OF DISASTERS HAPPENING IN YOUR COMMUNITY IN THE NEXT YEAR

FLORIDIANS UNDERUTILIZING RESOURCES THAT AID DISASTER PREPARATION

A little over half of Floridians reported having disaster or emergency plans they could utilize if necessary. Of the respondents who had developed plans, the organization or resource that was referenced most in their plans' development was the American Red Cross at 63 percent. Local fire departments, emergency operations centers and UF/IFAS Extension offices are also resources for families developing disaster plans, yet the majority of respondents did not take advantage or were unaware of these resources.

Regardless of whether they had disaster plans prepared in advance, the majority of Floridians were somewhat or very confident that local law enforcement and their families would be prepared to handle disasters and emergencies, should they occur. More than half of respondents said they would be able to evacuate if necessary and would still be able to obtain news and emergency information from local officials.

Sixty-two percent of respondents agreed or strongly agreed that their communities need additional disaster recovery programs.

ABOUT OUR SURVEYS

The PIE Center conducts at least four public opinion surveys every year that focus on issues of key significance to Floridians. The surveys explore what Floridians think about the rights, responsibilities, attitudes and behaviors associated with critical issues such as food production, water quantity and quality, community resilience and preparedness, as well as endangered and invasive species.
